I am a motivated full-stack software engineer interested in building digital products, scaling systems up, implementing clean architectures, and shipping reliable applications.

Technologies and Languages

- Languages: Typescript, JavaScript, Kotlin, Ruby, Python
- Frameworks: Next.js, Ruby on Rails, Nuxt, CrewAI
- Libraries: React, Vue, Storybook, Jest, Cypress, React testing library
- Technologies: MySQL, Postgres, AWS, Git, GraphQL, Node.js
- Other: Data structures and algorithms

Work Experience

Full-stack Software Engineer   **G5L**   **Jul 2024–Present**

Product team   Porto Alegre, Brazil

- Worked as a freelancer selling and developing projects from scratch achieving a 100% on-time delivery rate
- Conceptualized, developed, and launched a digital micro SaaS product, demonstrating entrepreneurial initiative and full-stack development skills.

Senior Fullstack Software Engineer   **Veganhive**   **Nov 2020–Apr 2024**

Engineering team   Toronto, Canada

- Led a team of 4 developers onboarding new members, guiding them to ensure the quality of the code and project architecture
- Designed and implemented a comprehensive end-to-end testing environment using Cypress and Jest, significantly reducing bugs and improving release cycles for our vegan social network platform.
- Advocated best practices, onboarded new team members, and conducted educational sessions to keep the team at the forefront of industry advancements
- Managed the full spectrum of product development, including the creation of a marketplace feature within the platform
- Collaborated in the product definition and development of a marketplace inside the social media

Full-stack Software Engineer   **G5L**   **Mar 2020–Nov 2020**

Product team   Porto Alegre, Brazil

- Managed the entire lifecycle of product development, integrating innovative engineering practices with real-world applications
- Developed full-stack solutions for 4 major clients, enhancing system security and operational efficiency
- Demonstrated adaptability and excellence in various engineering domains through dynamic problem-solving and comprehensive skill application
- Planned and managed budgets for 5 projects, achieving a 95% on-time delivery rate

Software Engineering Lead   **Wedy**   **Jun 2017–Feb 2020**

Product team   Porto Alegre, Brazil

- Started and led a comprehensive redesign of the company's web application, slashing infrastructure costs by 50% through optimized system architecture and efficient resource utilization.
- Organized the team using Objectives and Key Results (OKRs) to set goals and measure productivity, holding daily meetings to keep the team informed
- Hired and trained 4 new team members on project architecture and best practices, resulting in a 20% improvement in team productivity
- Collaborated in product strategy sessions and conducted A/B tests, leveraging user data to enhance platform retention rates by 38%.
- Directed a technical team using OKR frameworks, doubling revenue within 1 year by focusing on strategic feature developments and user-centric design improvements

Web developer   **Macro Publicidade**   **Mar 2014–May 2017**
Development team   Guaporé, Brazil

- Collaborated directly with over 30 clients from project inception to approval, designing layouts, developing user-centric websites, and providing ongoing support, enhancing customer satisfaction and retention.
- Managed end-to-end website development for over 30 clients, significantly enhancing client satisfaction and contributing to notable company growth.

Education and Certifications

- **Machine Learning Specialization,** DeepLearning AI, United States.   **Jul 2024–Sep 2024**
- **B.Sc. Software Analysis and Development,** Universidade de Passo Fundo, Brazil.   **2014–2017**

Languages

- Portuguese - native
- English - fluent

Interests

- Machine Learning.
- Software Architecture.
